

Door Replacement Service

Precision Engineered Steel Doors

PROJECT OVERVIEW

Background

There are many reasons why clients may need to change their existing doors to a bespoke steel door manufactured by W.C. Evans & Sons Ltd.

For example, timber doors are prone to deterioration and premature aging when exposed to the weather, so new steel doors offer a long-lasting, maintenance free option. Security can also be greatly improved with steel doors, as can the overall aesthetic appearance of the building.

Versatile Solutions for Diverse Applications

At W.C. Evans & Sons Ltd we are proud to service a diverse range of customers, from local authorities and social housing clients, to main contractors, private building owners and domestic homeowners.

No matter what the requirement, we have the manufacturing expertise and industry experience to fabricate custom made doors that perfectly meet our clients' requirements. From tank rooms, lift motor rooms and refuse store rooms, to bicycle stores, pram stores and other secure store rooms, our replacement steel door service offers exceptional value for money whilst also minimising disruption to building users.

No matter what the application, our precision-engineered steel doors are proven to provide reliable longevity and a secure, future-proof solution.
