

Hatcham Primary School Replacement & Upgrade of Access Gates

BEFORE

AFTER

PROJECT OVERVIEW

Background

This primary school approached WC Evans & Sons Ltd to replace their existing gates, which had reached the end of their service life. The requirement was for new gates that would not only provide robust security but also enhance the appearance of the site. The project involved replacing one set of double-leaf fire access gates together with three single pedestrian access gates.

A Custom-Made, Durable Solution

WC Evans & Sons Ltd provided a complete design and fabrication service, taking the project from concept through to completion. To give the client full confidence in the end result, CAD drawings were supplied in advance, allowing the school to review and approve the proposed designs before work began on site.

The gates were then custom-fabricated with decorative laser-cut tree motifs, produced in collaboration with our trusted supply chain and seamlessly incorporated into the overall design. Each gate was then expertly finished with a durable powder-coated coating, delivering a long-life, low-maintenance solution that combines functionality with visual appeal.

Thanks to exceptional workmanship and a complete, end-to-end service, the finished installation has provided the school with secure, attractive access points designed to last for many years to come.

CLIENT	Hatcham Primary School
