

Residential Property, Croydon

Demolition and Complete Property Rebuild

PROJECT OVERVIEW

Background

WC Evans & Sons Ltd were appointed to undertake the demolition and complete reconstruction of a residential property in Thornton Heath following significant damage caused by a serious incident at a neighbouring property.

The extent of the damage meant that repair and refurbishment were no longer viable, requiring the existing property to be carefully demolished and rebuilt to provide a safe, modern and fully compliant home.

Solution Provided

WC Evans & Sons Ltd managed the project from the initial demolition works through to the construction and final fit-out of the replacement property. The replacement property was carefully constructed to complement the character and appearance of the surrounding homes while delivering a high-quality modern finish throughout.

The completed property features high-quality external finishes together with bright, modern internal living spaces, creating an attractive and practical family home that sits seamlessly within the existing streetscape.

The finished project has transformed a severely damaged property into a high-quality new home. It demonstrates WC Evans & Sons Ltd's ability to successfully deliver complex residential reconstruction projects from demolition through to completion, with meticulous attention to detail at every stage.
